	This gene encodes one of six different actin proteins. Actins are	
	highly conserved proteins that are involved in cell	
	motility, structure, integrity, and intercellular signaling. The	
	encoded protein is a major constituent of the contractile apparatus	
地基人勿	and one of the two nonmuscle cytoskeletal actins that are	
背景介绍	ubiquitously expressed. Mutations in this gene cause Baraitser-	
	Winter syndrome 1, which is characterized by intellectual disability	
	with adistinctive facial appearance in human patients. Numerous	
	pseudogenes of this gene have been identified throughout the human	
	genome. [provided by RefSeq, Aug 2017].
